

**Model No. LDV940Q4000WC**  
**940nm High Power QCW Conduction-Cooled Vertical Array**

The LDV-series high power packaged bars provide OEM customers with scalable power up to kilowatts for pumping, industrial and medical applications. The packaged laser bars can be configured for enhanced brightness through stacking, scaled linearly or vertically for optimized light and material integration.

**FEATURES**

- 940nm Conduction-Cooled Vertical Array
- QCW Operation
- High output power: 4000W
- Spectral width: <5 nm
- High reliability, High efficiency
- Modular and compact design for ease of integration
- Packaged 10mm laser diode bar

**SPECIFICATIONS (T<sub>c</sub> = 25°C)**

ITEM	PARAMETER	LDV940Q4000WC	UNIT
<b>OPTICAL PARAMETER</b>	Center wavelength	940	nm
	Operation mode	QCW	-
	Output power	4000	W
	Output power/bar	200	W
	Spectral width	<5	nm
	Bar quantity	20	-
	Wavelength Temperature coefficient	0.28	nm/°C
	Pulse width	<500	µs
	Duty ratio	≤4	%
	Fast axis divergence	<39	deg
	Slow axis divergence	<10	deg
<b>ELECTRICAL PARAMETER</b>	Threshold current	<30	A
	Operating current	<200	A
	Operating voltage/Bar	<2.0	V
<b>THERMAL PARAMETER</b>	Operating temperature	15 to 35	°C
	Storage temperature	-10 to +60	°C

MECHANICAL OUTLINE (unit: mm)

Notes:

1. The above specifications are subject to change without notice.
2. Please make sure that the laser diode is operated under the temperature between 15 °C and 35 °C, as high temperature will increase threshold current, decrease exchange rate and accelerate the aging.
3. Please take measures to avoid condensation, which will cause aging of laser diode.
