

## GD1610 Series 1610nm Diode Laser System up to 20mW (TEM<sub>00</sub>)

### Overview

The GD1610 series diode laser is ideal for applications that require a wavelength of 1610nm and output power levels up to 20mW. The laser features TEM<sub>00</sub> mode, narrow linewidth, no jump mode output in operating current range, compact design, long operating lifetime, easy operation and FDA-compliant system with driver. The laser is widely used in optical fiber gas detection system, optical sensing, fiber communications, measurement, communication, spectrum analysis, and many other applications.

### Remarks:

- The laser head needs to be used on a heat sink with good heat dissipation.
- Specifications of the CW laser is based on the laser performance at full power output after the specified warmup period. The stability of output power may change when output power is adjusted at a different power level.
